

WHAT IS INCLUSIVE PLAY?

Including and Enriching All Children

Inclusive play is primarily about <u>all children</u> having <u>equal access</u> to participate in play at the local playground regardless of ability, age or comfort-level. While children won't always be able to participate in every activity, the goal is to offer all children a variety of activities at varying levels of difficulty in the same space.

Inclusive vs. Accessible

WHY IS IT IMPORTANT?

Learning Life Lessons Through Play

Play is an essential component in both the lives of children and adults because it directly affects our physical, mental, emotional and social well-being. While play promotes self-awareness, inclusive play promotes community-awareness. Through inclusive play children develop a better sense of value in themselves and others while they grow and learn from one another.

The benefits of play and inclusion are virtually endless! Through inclusive play, children are able to:

- · Socialize · Work Together · Build Confidence · Learn from One Another · Build Cognitive Skills · Share Expectations
- Practice Communication Set and Achieve Goals Learn Conflict Resolution Improve Problem Solving
- Develop Friendships and Social Skills Understand Roles Improve Physical Fitness

Coronado Elementary in Salina, KS

Salina, Kansas is home to a national service organization chapter dedicated to creating mobility and independence for people with disabilities. They provided the vision to bring an incredible, inclusive playground to their city. A multitude of other community champions fueled the donation and fundraising efforts along the way, including the Coronado PTO. The goal was to create a fully accessible playground to include all students at Coronado Elementary as well as the other children and adults in the community. Creating a fun environment for people to gather was of upmost importance.

FEATURED INCLUSIVE PLAY EVENTS

ACCESS: ADAAG Ramps

MOTION PLAY: Swings

This ramp system winds around the entire playground from ground-level up to 72" giving all children access to the entire play space. The Trike Trail around the playground allows for great imaginative play with Cozy Corners, a Drive Thru and Gas Station. Burke Turf is the perfect finishing touch, adding seamless accessibility throughout the entire space.

SENSORY PLAY: Drive Thru with Fun Phone

SOCIAL PLAY: Gas Station

VARIETY OF PLAY

Components for Every Child

When designing an inclusive playground, it is important include a variety of challenging and relaxing play events that so children and their caregivers with different skill levels can play. At Burke, we include a variety of climbers, slides, interactive panels and sensory accessories with every playground we create to allow children with all abilities, such as Autism, Down Syndrome and the visual or hearing impared to all play together in the same space. It is also important to include a transfer station and variety of ground-level activities like tunnels, activity panels and counters to include those with accessibility challenges.

Multiple Play Areas

Playgrounds are often associated with active climbing, sliding, spinning and hanging. Don't forget to add areas that encourage imaginative play and socialization like counters, paint centers and sand or water tables. This encourages children to interact and take a break away from the active play area. Having benches or tables with shade close by is also important for playground supervisors and resting children.

START WITH THE BASICS

Playground Access

One of the most important aspects of inclusive play is accessibility. An accessible playground provides space that is reachable by everyone, including those that require walkers, wheelchairs or other mobility devices. Accessible playgrounds in the U.S. must comply with current ADA standards addressing routes, surfacing, ramps, access, transfer space, ground-level activities and more.

Burke Turf. & Burke Tiles.

A playground surface must not only be safe, but also accessible. Children and adults that require mobility devices will have a more difficult time moving through loose fill surfacing like engineered wood fiber. Your Burke representative offers various unitary surfacing options including rubber tiles and artificial turf, which are safe, durable and extremely accessible.

Northwoods Park - Brooklyn Park, MN

Accessibility and inclusive play is integral to the community of Brooklyn Park. In fact, a great feature of Northwoods park is a wheelchair softball court. When looking to update the play area, inclusive play was vital. They wanted a unique environment where children of all abilities could share in the social and developmental benefits of play.

TYPES OF PLAY

Children with Down Syndrome, Autism or other sensory processing disorders may find it difficult to play and interact with other children on the playground. They have challenges with motor coordination, socialization and imagination. Including different types of play into your playground area encourages these children to play independently or along side others.

Sensory Play

It is vital to include play events that stimulate sensory activity. This enhances and develops the areas of cognitive motor skills, creative thinking, tactile movement and auditory interaction.

Auditory: Burke's Sound Garden is the perfect auditory activity to add to any playground design. Our variety of music play events include drums, a rain wheel and electronic piano sounds.

These panels allow children to learn about the fundamentals of music while they play.

Tactile: Sand and Water Play is a great tactile play event. We also offer a variety of Interactive panels featuring different textures including a Panel to teach children about Braille.

Visual: Burke offers panels and other play events in a variety of colors that provide visual stimulation to children of all abilities.

To learn more about Burke's sensory play events, visit **bciburke.com/inclusive**.

Social Play

Include areas where children can gather to socialize, learn and play together. This can be an area to relax with benches and tables, or can even be integrated into the playground. Add some Leaf Seats under a platform or incorporate NaturePlay® Rocks and Stumps as a natural relaxing area. Cooperative play events like the Volito Multi-User Swing and Cruiser are also great ways to get kids on the Autism spectrum socializing and working together with a common goal - to create movement. Lastly and certainly not least, imaginative play aids in social development. Create a Trike Trail with the Burke PlayHouse, a Gas Station and Drive Thru or theme your entire structure.

Motion Play

Play events that sway, swing or spin help kids develop necessary perceptual skills, spacial awareness and sensory integration. They can also help to build strength, balance and coordination and best of all, they're just plain fun!

Family YMCA in Fond du Lac, WI

When the Fond du Lac Family YMCA decided to upgrade their building, they wanted to include an all new play area for the children they teach and care for. This made it important to include plenty of sensory play events that promote child development. It was equally important to include an active play area where children can improve physical fitness, build strength and coordination while having fun just by playing.
